

Processing Community Day is an event to celebrate art, code, and diversity. It brings people together for sharing panels, talks and workshops around how programming can intertwine and converge with artistic expression for the creation of sound and visual arts. This event is part of a large network of similar events that will happen around the world (in Bangalore, Mexico City, Los Angeles, São Paulo, Stockholm, Tokyo, etc.).

*PCD 2021, Montréal* will be held for the second time on July 13th. Our interest is to continue making community around these and other practices to encourage and find resonances that can become artistic or collaborative work. We are receiving applications through an open-call where you can register to take part of a panel or impart a workshop. You will find more information in the following link.
